Essay Questions

111. Explain why competitive advantages are temporary.
(p. 19)

A competitive advantage is a feature of a product or service on which customers place a greater value than they do on similar offerings from competitors. Competitive advantages provide the same product or service either at a lower price or with additional value that can fetch premium prices. Unfortunately, competitive advantages are typically temporary, because competitors often quickly seek ways to duplicate them. In turn, organizations must develop a strategy based on a new competitive advantage. Ways that companies duplicate competitive advantages include acquiring the new technology, copying business processes, and hiring away employees.

112. Describe Porter's Five Forces Model and explain each of the five forces.

(p. 20-22)

Porter's Five Forces Model analyzes the competitive forces within the environment in which a company operates, to assess the potential for profitability in an industry. Buyer power is the ability of buyers to affect the price they must pay for an item. Supplier power is the suppliers' ability to influence the prices they charge for supplies (including materials, labor, and services). Threat of substitute products or services is high when there are many alternatives to a product or service and low when there are few alternatives from which to choose. Threat of new entrants is high when it is easy for new competitors to enter a market and low when there are significant entry barriers to entering a market. Rivalry among existing competitors is high when competition is fierce in a market and low when competition is more complacent.

(p. 23)

Organizations typically follow one of Porter's three generic strategies when entering a new market: (1) broad cost leadership, (2) broad differentiation, or (3) focused strategy. Broad strategies reach a large market segment. Focused strategies target a niche market. Focused strategies concentrate on either cost leadership or differentiation.

114. Demonstrate how a company can add value by using Porter's value chain analysis.

(p. 25)

To identify competitive advantages, Michael Porter created value chain analysis, which views a firm as a series of business processes that each add value to the product or service. The goal of value chain analysis is to identify processes in which the firm can add value for the customer and create a competitive advantage for itself, with a cost advantage or product differentiation. The value chain groups a firm's activities into two categories - primary value activities and support value activities. Primary value activities acquire raw materials and manufacture, deliver, market, sell, and provide after-sales services. Support value activities, along the top of the value chain in the figure, include firm infrastructure, human resource management, technology development, and procurement. Not surprisingly, these support the primary value activities.
