STATE STANDARDS: United States - PA - DISC: International trade and fi - DISC: International trade and finance

TOPICS: Historical Development of Modern Trade Theory

KEYWORDS: BLOOM'S: Knowledge

3. The trading principle formulated by Adam Smith maintained that:
- International prices are determined from the demand side of the market
 - Differences in resource endowments determine comparative advantage
 - Differences in income levels govern world trade patterns
 - Absolute cost differences determine the immediate basis for trade

ANSWER: d

POINTS: 1

DIFFICULTY: Moderate

NATIONAL STANDARDS: United States - BPROG: Reflective Thinking - BPROG: Analysis

STATE STANDARDS: United States - PA - DISC: International trade and fi - DISC: International trade and finance

TOPICS: Historical Development of Modern Trade Theory

KEYWORDS: BLOOM'S: Knowledge

4. Unlike Adam Smith, David Ricardo's trading principle emphasizes the:
- Demand side of the market
 - Supply side of the market
 - Role of comparative costs
 - Role of absolute costs

ANSWER: c

POINTS: 1

DIFFICULTY: Moderate
NATIONAL STANDARDS: United States - BPROG: Reflective Thinking - BPROG: Analysis
STATE STANDARDS: United States - PA - DISC: International trade and fi - DISC: International trade and finance
TOPICS: Historical Development of Modern Trade Theory
KEYWORDS: BLOOM'S: Knowledge

5. When a nation requires fewer resources than another nation to produce a product, the nation is said to have a:
- Absolute advantage in the production of the product
 - Comparative advantage in the production of the product
 - Lower marginal rate of transformation for the product
 - Lower opportunity cost of producing the product

ANSWER: a

POINTS: 1

DIFFICULTY: Moderate

NATIONAL STANDARDS: United States - BPROG: Reflective Thinking - BPROG: Analysis

STATE STANDARDS: United States - PA - DISC: International trade and fi - DISC: International trade and finance

TOPICS: Historical Development of Modern Trade Theory

KEYWORDS: BLOOM'S: Comprehension

6. According to the principle of comparative advantage, specialization and trade increase a nation's total output since:
- Resources are directed to their highest productivity
 - The output of the nation's trading partner declines
 - The nation can produce outside of its production possibilities curve
 - The problem of unemployment is eliminated

ANSWER: a

POINTS: 1

DIFFICULTY: Moderate

NATIONAL STANDARDS: United States - BPROG: Reflective Thinking - BPROG: Analysis

STATE STANDARDS: United States - PA - DISC: International trade and fi - DISC: International trade and finance

TOPICS: Historical Development of Modern Trade Theory

KEYWORDS: BLOOM'S: Comprehension

7. In a two-product, two-country world, international trade can lead to increases in:
- Consumer welfare only if output of both products is increased
 - Output of both products and consumer welfare in both countries
 - Total production of both products, but not consumer welfare in both countries
 - Consumer welfare in both countries, but not total production of both products

ANSWER: b

POINTS: 1

TOPICS: Trading under Constant-Cost Conditions

KEYWORDS: BLOOM'S: Comprehension

55. "The equilibrium relative commodity price at which trade takes place is determined by the conditions of demand and supply for each commodity in both nations. Other things being equal, the nation with the more intense demand for the other nation's exported good will gain less from trade than the nation with the less intense demand." This statement was first proposed by:

- a. Alfred Marshall with offer curve analysis
- b. John Stuart Mill with the theory of reciprocal demand
- c. Adam Smith with the theory of absolute advantage
- d. David Ricardo with the theory of comparative advantage

ANSWER: b

TOPICS: Production Gains from Specialization

KEYWORDS: BLOOM'S: Comprehension

169. Discuss the pitfalls of outsourcing, especially as experienced by Boeing.

ANSWER: Boeing outsourced its production capabilities for the Boeing 787 Dreamliner to facilities in several different countries, each of which made one component part of the aircraft. The plane would be assembled in the U.S. Boeing also required these manufacturers, as a condition of getting the contract for production, to fund part of the development of the plane. To save money, some manufacturers outsourced a portion of their part of the job, causing quality problems and production delays. By giving up control over its supply chain, Boeing suffered from delays and parts that did not meet the requirements, and could not be assembled. Production of the planes was 4 years behind schedule, and costly.

TOPICS: Comparative Advantage and Global Supply Chains

KEYWORDS: BLOOM'S: Comprehension

170. Is it possible to estimate the gains from trade?

ANSWER: When a nation trades, it enjoys a larger income, owing to a wider range of goods available to consumers. Trade also has a positive influence on productivity levels. However, it is

extremely difficult to measure these gains, since it requires knowledge of what a nation's imports would cost if it produced them itself, instead of purchasing them from a less expensive source abroad.
